Inviting Written Submissions to the Global Energy Parliament 2026

Purpose

The **16th Annual Global Energy Parliament** to be held from December 4-5, 2026 at Thiruvananthapuram calls upon all Members of Parliament (MPs) to engage with a critical globally relevant theme:

"The Foundations of Peace: Principles and Practices—Exploring the personal, social and institutional conditions for a more peaceful world."

The parliament explores the theoretical foundations and practical approaches essential to building and sustaining lasting peace. Grounded in **Swami Isa's I-Theory**—which unifies Energy and Consciousness to explain how internal and external balance is maintained—the GEP examines the personal, social, and institutional conditions necessary for peaceful coexistence and global harmony.

Our deliberations will address pivotal questions:

- How can scientific knowledge and energy dynamics (via the I-Theory) contribute to peace building?
- What essential knowledge of energy balance must humanity cultivate to foster a peaceful world?
- What practices and social structures enable peaceful societies to thrive?

By synthesizing diverse perspectives on peace-building strategies, the parliament aims to formulate meaningful policy recommendations for a more peaceful future.

Members are invited to deliver written and oral submissions that deepen our collective understanding of peace and help translate its foundational principles into actionable policy recommendations and sustainable practices.

Who Can Submit?

All registered Members of Parliament (individuals or groups) for GEP 2026 are invited to submit a Written Submission.

All accepted submissions will be published.

Some Written Submissions will be invited for Oral Presentation in the parliament.

The Context

Peace is often treated merely as the absence of conflict. A ceasefire can end violence without creating the environment required for lasting peace, just as a society may be free from open violence without having laid the groundwork for peace to be sustainable. Sustainable peace therefore demands far more than formal agreements between opposing factions—it requires a deep understanding of the conditions that allow individuals, societies, and institutions to live and function without resorting to conflict.

The human capacity for innovation is as old as the human capacity for conflict. We have developed extraordinarily sophisticated systems of knowledge, communication, and governance; yet, our ability to create and maintain peace has not kept pace with our ability to invent new forms of destruction. The central challenge is therefore not simply to desire peace, but to understand it deeply enough to make it sustainable.

In previous sessions, the Global Energy Parliament explored the relationship between rising global temperatures and emotional agitation—the connection between inner and outer heat. Building on **Swami Isa's I-Theory**, which demonstrates that all physical, mental, and environmental phenomena stem from fundamental units of energy (I-particles) and their vibrating states (White, Red, and Black Matter), the Parliament turns in its 16th year to methods of maintaining coolness: the knowledge, capacities, and conditions that enable peaceful ways of living to be established and maintained.

This inquiry extends far beyond traditional diplomacy and conflict resolution. Peace possesses personal, social, and institutional dimensions:

Personal: How individuals understand themselves, regulate internal energy/emotions, and relate to others.

Social: What societies value, how they are organized, and how collective energy equilibrium is sustained.

Institutional: How institutions are designed and administered to foster balance over agitation.

Every sector of society holds knowledge and experience that can contribute to this understanding. Our goal is to move from **aspiration to understanding**, and from **understanding to practice**:

- Towards a **common framework** (informed by energy-consciousness unity) for the foundations of sustainable peace.
- Towards **practical principles** that individuals, societies, and institutions can apply to establish and maintain balance.

The conclusions and policy proposals emerging from the Parliament will be conveyed to international leaders and relevant global bodies, including the United Nations.

What to Include in Your Submission

The GEP theme, *The Foundations of Peace – Principles and Practice,* invites an interdisciplinary exploration of the values, knowledge and practical approaches necessary to establish and sustain peace at personal, social and institutional levels.

Core Expectation

Your submission must present an **innovative idea grounded in evidence** (utilizing the scientific principles of energy, consciousness, or the I-Theory framework where applicable), rather than a statement of personal beliefs or opinions. The core underlying question of the parliament is:

What should individuals, society, institutions, and/or governments do differently?

Draw directly from your professional expertise, scientific research, or field insight to substantiate your proposal.

Focused Thematic Areas

Submissions should explore one or more of the following interconnected areas:

1. Personal, Social and Institutional Conditions for a Peaceful World

Examines the systemic conditions and internal energy dynamics that enable individuals, communities, societies, and institutions to coexist harmoniously and resolve grievances without violence.

2. Common Foundations of Sustainable Peace

Explores fundamental principles (such as the non-dual plane of Consciousness in I-Theory) that make peace durable rather than temporary, identifying shared human and energy baselines that serve as a bedrock for peaceful coexistence.

3. The Contribution of Science to Peace

Examines how scientific research, unified field models (such as the I-Theory link between matter, energy, and mind), empirical methodologies, and technological innovations can contribute to violence prevention and peaceful societies.

4. Essential Knowledge Humanity Needs to Create Sustainable Peace

Identifies the critical knowledge humanity must learn and transmit across generations (e.g., Education for Total Consciousness) to balance thoughts, emotions, and external actions for lasting peace.

5. Active Practices of Peaceful Societies

Investigates how peaceful values and energy equilibrium are expressed in daily behaviour, social relationships, cultural norms, institutional mechanisms, and collective civic action.

Submission Criteria

Submissions will be rigorously evaluated against the following criteria:

Criteria	Description
Relevance	Aligns clearly with the GEP 2026 theme and core energy-consciousness principles.
Evidence	Grounded in credible research, empirical data, or field insight (including applications of I-Theory science where relevant).
Clarity	Structured logically, written clearly, and accessible to a broad global audience.
Originality	Concepts and words must be original. Submissions must offer innovative ideas. **AI-generated texts will not be accepted.**
Policy Contribution	Offers actionable, practical policy recommendations specifying what relevant stakeholders need to do differently.
Long-Term Positivity	Demonstrates a long-term, net-positive impact that contributes meaningfully to lasting global peace and balance.

Format

Length: 4 to 8 typed pages (inclusive of References).

Typography & Layout: 12-pt standard font, 1.5 line spacing.

Author Details: Name of the Member of Parliament, contact address, and phone number must be prominently displayed at the top of the first page.

Citations: References must strictly follow **APA Style** (APA Citation Guidelines).

File Format: Final manuscripts must be submitted in **Microsoft Word format (.doc / .docx)**.

Originality & Copyright Declarations

- Authors are discouraged from using previously published material. Any prior distribution or publication of any part of the manuscript must be fully disclosed upon submission with proper attribution included.
- Authors are solely responsible for obtaining copyright permissions for any illustrations, tables, figures, or lengthy quotations reproduced from external sources.

Eligibility

You must already be registered for GEP 2026 as a Member of Parliament before making a Submission. (Not registered? Register now: www.global-energy-parliament.net/gep2026)

Publication

All accepted Written Submissions following the specified guidelines will be published in the official parliament publication. The editorial committee may coordinate with authors regarding minor structural or content revisions to meet publication standards.

Submission Deadline: **November 15, 2026 by 12:00 PM IST**.

How to Submit: Submit your completed manuscript as an email attachment in Microsoft Word format to: **chair@global-energy-parliament.net**

Oral Submissions: Authors selected for oral presentation will be notified via email.

Venue of the Parliament: Kerala State Secretariat Assembly Hall, Thiruvananthapuram
